

Crepe

Color

Coating

With basis weights between 40# and 140# and a stretch anywhere from 2% to 12%, our crepe paper offers enormous flexibility and can be used for anything from filter paper to packaging.

Things to Notice

Crepe has a soft, natural, textured feel and look to it. Our strong, heavyweight and durable crepe is used in converting and industrial applications. Its 2-12% stretch allows it to conform without cracking or tearing. Very few mills in the world are capable of this type of creping. Our ability to combine it with colors and coatings puts Ivex in a league of its own.

Technical Specifications

BASIS WEIGHT #/3000 FT	40 - 140
GSM	65 - 225
